

Product Catalog Third Edition

Medical Solutions International has been privileged to serve the dialysis community since 1989. We designed and manufactured the first commercial Bicarbonate Mixing and Distribution System, the first commercial Acidified Distribution systems and the first dialysis specific commercial Patient Wall Station.

We have built our business on the faith and trust of our dialysis customers. Our innovative equipment designs were improved over the years by listening to our customers needs and performance expectations.

We will continue to strive to be innovative and reactive to our customers. Please feel free to contact us if you have an idea that you feel could be developed to better serve the dialysis community.

Bicarbonate Mixing & Distribution System

Dual Tank Bicarbonate Mixing and Pressurized Distribution System

These systems have 25 to 100 gallon mixing capacity, with electronic fill and dispense options, variable batch size, internally balanced agitation, sanitization/disinfection mode, a .2 micron air filter, and timed cycle processing, they employ two 100 gallon tanks, one for mixing and one for distribution. With this system, you may effectively reconstitute dialysate powders in a closed system with a managed fill to accomplish predictable/reproducible batch quality.

The systems are designed for low volume, low pressure dynamic distribution of mixed Bicarb concentrate to patient stations. The systems lend themselves to simple, complete sanitization and effective rapid rinse. The system is Ozone compatible and built to receive ozone from any style of ozone generator.

ACIDIFIED CONCENTRATE DISTRIBUTION SYSTEM

We use all corrosion resistant materials as well as FDA registered process piping, tanks, controls, etc. The system is designed to transfer acidified concentrate from bulk storage to the patient stations by controlled low pressure pump. The system consists of transfer pumps, valves, fittings, and a complete electronic control. Includes pressurized jug fill.

Mr. Acid! is clean, spill free and easy. No more slick dangerous floors. No more spilling and sliding. No more ruined shoes and floors.

This patented system is made to fit right on the acid drum or can be ordered for carts to fill from bulk storage tanks.

This Is Just Too Easy! Automatic Jug Filling!

Just place the jug, push the button, walk away ... Mr. Acid! will fill the jug and automatically shut off when full. Mr. Acid! works on any dialysis machine jug and works with any acidified concentration or with bicarb.

Wall Station for Dialysis

Our recessed dialysis wall stations include a solutions distribution center and drain. Each is 18" wide by 18" high, and made of high quality molded polyethylene. The durable material can be fitted with a variety of valves, fittings, pressure gauges and quick connects so as to accommodate the installation of compatible dispensing with any dialysis delivery system on the market today. The easily cleaned, chemical resistant wall station also receives the drainage from the dialysis machine. The drip-proof cartilever valve block keeps the unit free of spills and stains. All valving is color coded and signage designated.

NOTE: When replacing Impeller Bushing in the field:

The plastic bushing must be bored to size after they have been pressed into the impeller. Bore to .378/.381 I.D. The carbon and ceramic bushings are to finished size and do not require boring.

When attaching drive magnet (item 9) to the motor shaft, position the face of the drive magnet 1/16 inch below the face of the motor bracket (item 10)
