

## Beige Wall Station w/ No Fittings

W-RPWS-B000

Our recessed dialysis wall stations include a solutions distribution center and drain. Each is 18" high by 18" wide, and made of high quality molded polyethylene. The durable material can be fitted with a variety of valves, fittings, pressure gauges and quick connects so as to accommodate the installation of compatible dispensing with any dialysis delivery system on the market today. The easily cleaned, chemical resistant wall station also receives the drainage from the dialysis machine. Its recessed port panel assists the operator in keeping spills and stains off the floor. All valving is color-coded and signage designated. A licensed plumber must install the final drains to code.

Front View

### **Features:**

Corrosion Resistant Materials

Easy Access and Operation Controls

Recessed Port Panel

### **Benefit:**

The entire system is constructed of High Density Polyethylene, Delrin, PVC or Stainless Steel.

Top forward placement of on/off switches ensures easy reach and operation for staff.

Allows drips or leaks from fittings to drip into the drain pan and not onto the floor. Keeps connection points from coming in contact with patient chairs.

## **IMPORTANT PLEASE READ**

### End Point Interface Fitting:

Dialysis machine manufacturer-specific Bicarb and Acidified delivery machine end point interface fittings for mounting on the wall station can be provided either by your facility or by our firm, and are NOT included in this quotation.
