**Medical Solutions**

I N T E R N A T I O N A L

Medical Solutions International has been privileged to serve the dialysis community since 1989. We designed and manufactured the first commercial Bicarbonate Mixing and Distribution System, the first commercial Acidified Distribution systems and the first dialysis specific commercial Patient Wall Station.

We have built our business on the faith and trust of our dialysis customers. Our innovative equipment designs were improved over the years by listening to our customers needs and performance expectations.

We will continue to strive to be innovative and reactive to our customers. Please feel free to contact us if you have an idea that you feel could be developed to better serve the dialysis community.

## Bicarbonate Mixing & Distribution System

### Dual Tank Bicarbonate Mixing and Pressurized Distribution System

These systems have 25 to 100 gallon mixing capacity, with electronic fill and dispense options, variable batch size, internally balanced agitation, sanitization/disinfection mode, a .2 micron air filter, and timed cycle processing, they employ two 100 gallon tanks, one for mixing and one for distribution. With this system, you may effectively reconstitute dialysate powders in a closed system with a managed fill to accomplish predictable/reproducible batch quality.

The systems are designed for low volume, low pressure dynamic distribution of mixed Bicarb concentrate to patient stations. The systems lend themselves to simple, complete sanitization and effective rapid rinse. The system is

### ACIDIFIED CONCENTRATE DISTRIBUTION SYSTEM

We use all corrosion resistant materials as well as FDA registered process piping, tanks, controls, etc. The system is designed to transfer acidified concentrate from bulk storage to the patient stations by controlled low pressure pump. The system consists of transfer pumps, valves, fittings, and a complete electronic control. Includes pressurized jug fill.

"It won't let you forget".

### Wall Station for Dialysis

Our recessed dialysis wall stations include a solutions distribution carrier and drain. Each is 18" wide by 18" high, and made of high quality molded polyethylene. The durable material can be fitted with a variety of valves, fittings, pressure gauges and quick connects so as to accommodate the installation of compatible dispensing with any dialysis delivery system on the market today. The easily cleaned, chemical resistant wall station also receives the drainage from the dialysis machine. The drip-proof cantilever valve block keeps the unit free of spills and stains. All valving is color coded and signage designated.
